*Notă:

Puterea calorică superioară a fost determinată ca medie ponderată cu cantitatea a puterilor calorifice superioare măsurate în perioada anului calendaristic 2008 pentru fiecare punct de intrare în SNT considerat.

Condiții pentru determinarea PCS: temperatura de combustie 15°C;

Condiții pentru măsurarea volumelor gazelor anturale: p=1,01325 bar și t=15°C;
