

Dear partners,

We would like to inform you that, **starting from 31.08.2023, for the gas day 01.09.2023**, Transgaz SA offers, on the RBP platform, **the within-day interruptible capacity product** at the interconnection points of the Romanian National Gas Transmission System with the natural gas transmission systems of the European Union Member States neighbouring Romania at Csanádpalota, Ruse-Giurgiu and Negru Voda 1.

The within-day interruptible capacity product represents the capacity that can be requested, in a given volume, by a network user during a certain gas day, from the time when the offer for this product is published until the end of the same gas day.

After the exhaustion of the firm within-day capacity, provided that there is available interruptible capacity, **an auction of within-day interruptible capacity shall be organised every hour during a gas day** using a **uniform price auction algorithm** as described in Article 18 of the CAM NC.

The available interruptible capacity shall be determined in accordance with the provisions of Article I, point 1 of ANRE Order No 215/2019.

The offer of within-day interruptible capacity shall comply with the hourly intervals set out in the auction calendar published by ENTSOG for within-day firm capacity, with the stipulation that **once the within-day firm capacity has been exhausted, within-day interruptible capacity shall be offered at the next hour for the remaining hours until the end of the day.**

If the firm capacity offer has been exhausted in the day ahead auction, then **the available interruptible capacity shall initially be offered in the day ahead interruptible capacity auctions** and subsequently **the remaining available interruptible capacity** after the close of the daily auctions **shall be offered hourly in the within-day interruptible capacity auctions for the remaining hours until exhaustion.**

The auction announcements regarding the offered interruptible within-day capacities are available on [Portalul PRRC](#), **after the closing of the last day ahead auction**, if the firm capacity has been exhausted, starting from **07:00 p.m. - RO time**, i.e. 04:00 p.m. UTC (summer time) and 05.00 p.m. UTC (winter time), or within-day, **at the hour immediately following the exhaustion of firm within-day capacity.**

For clarifications regarding auctions, please do not hesitate to contact us at support@rbp.hu (in English) or at rbp@transgaz.ro.

Yours sincerely,

SNTGN Transgaz SA
